MITSUBISHI PENCIL COMPANY, LIMITED

# History of uni products

1887

Niroku Masaki, with 10 employees, establishes the Masaki Pencil Manufacturing Company in Shinjuku, Tokyo.

1901

Masaki Pencil becomes the first company to deliver domestically manufactured pencils (postal-use No.1, No.2 and No.3 pencils) to the predecessor of Japan Ministry of Internal Affairs and Communications.

1979

Release of the UB-100  
Seeking more satisfactory writing performance of roller pens, the company introduces the "uni-ball", the world's first roller pen to incorporate a metal tip. The pen's exceptionally smooth writing performance makes it an immediate hit in the Japanese and American markets, generating explosive sales.

1980

Release of the Paint Marker  
Mitsubishi Pencil's first product using white pigment ink (titanium oxide).

1983

POSCA Marker  
Water-based ink marker using color pigment.

1986

Release of the UB-155  
First ball-point pen to match the pigment ink with stainless steel tip.  
Product commemorating the 100th anniversary of the company.

1986

Release of the Prockey Marker  
Together with the UB-155, a product commemorating the 100th anniversary of the company. Featuring water-based ink providing color with the pigment itself without using a white base of titanium oxide.

1994

Release of the uni-ball eye  
Product symbolizing the establishment of Mitsubishi Pencil's pigment dispersion technology.

1994

Release of the uni-ball Signo  
Mitsubishi Pencil's first gel ink roller ball pen.  
Added to the pigment ink model line-up.

2001

Release of the uni-ball Vision ELITE  
The first eight-colour series of pigment ink liquid roller ball pens.

2003

Release of the uni-ball Signo 207  
The first long shelf life pigment gel ink roller ball pens.

2003

Release of the JETSTREAM  
New roller pen "JETSTREAM" is released, realizes by the quick-drying "new rollerball ink", which achieves a new smooth and light feel.

2015

Release of the uni-ball AIR  
The revolutionary new pen with the Hybrid-Tip technology that integrates the softness of a felt tip and the toughness of a roller ball pen.

2015

Release of the uni-ball Signo TSI  
New thermo sensitive ink that allows you to write and erase as you want.

2015

Release of the uni-ball Signo 307  
World's first practical application of cellulose nano fibers. The newly improved gel ink roller ball pen with skip free and quick dry technology.

2019

EMOTT  
EMOTT is unique and attracts the users emotionally. With EMOTT, you are able to draw and write your feelings, emotions and personality. 40 stylish colours Invite you to a colourful world with your uniqueness.

2020

uni-ball one  
The black colour of the "uni-ball one" ink is much darker than any other conventional black gel ink ball-point pens. An outstanding outlook with its simple & straight body design, uni-ball one was winning the IF design award 2021.

2024

uni-ball ZENTO  
The concept behind this pen is "Less is More," and the feature of this developed retractable roller ball pen is the sleek design of the barrel that leaves only what is necessary.

## [STRUCTURE]

### uni JETSTREAM

**Mechanism and materials**

The spring tip prevents ink leakage without impairing the feel when writing.

Combined with the properties of the ink, the optimized pen tip assures smooth writing with densely coloured lines.

The ink is protected by the special tube made of material.

**ink** Features of the JETSTREAM Twin Ball mechanism is using a stainless plate to prevent the reverse flow of ink.(0.7mm/1.0mm)

**Prevents reverse flow!**

### uni-ball signo

**Gel Ink and Twin-Ball Structure of the Twin-Ball Mechanism**

Employing a water-based gel ink, Signo ensures constant ink flow without blurring or dripping. Its twin-ball mechanism prevents excessive ink flow.

- When the pen is positioned in a downward position, the ink flows smoothly from the ink flow channel.
- When the pen is positioned in an upward position, the reverse flow prevention ball works to stop the flow of air into the ink.

### uni-ball AIR

**The cushion function tip**

**Mechanism of the tip**

This "AIR suspension mechanism" and the soft "Acetal tip" reduces the friction and the contact with the paper while writing, allowing for a lighter and smoother writing experience.

### uni-ball eye

**Uni-Flow System**

The "UNI-FLOW SYSTEM" ensures smooth writing performance to the last drop of ink. Excess ink flow from the ink reservoir can be temporarily stored to ensure constant ink flow to the pen point.

### uni POWER TANK

**Transparent Pressurised Refill**

It has only been possible to produce metallic, non-transparent refills, but now you can check the ink supply with the world's first transparent pressurised refill made possible by Mitsubishi Pencil.

### uni KURU TOGA

**The mechanical pencil with the revolving lead that stays sharp**

The gears inside the pencil revolve as the pencil lead presses down and lifts off the paper. Each time you write, the lead moves fractionally to maintain an even sharpness.

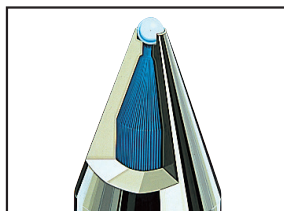

**A Close-Up of the Lead Tip**

The pencil lead wears evenly through a 360 degree cycle to maintain the unique KURUTOGA cone-shaped tip.

## [TIP]

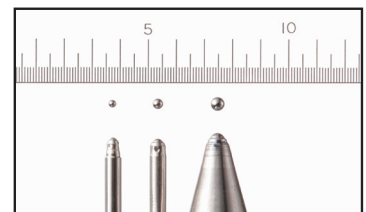

### Commitment to Stainless Steel Tip

Mitsubishi Pencil employs a stainless steel tip in most pens with our own precision processing technology. Any of our pens can maintain a uniform line with no change in thickness and is skip-free from start to finish. In addition, writing is smooth and fatigue-free. This, along with pigment ink, is an important element that ensures the high quality of uni-ball.

### The finest technology achieves smooth writing

The strong pen point and the precise ink flow were made possible between the combination of newly developed tip and ultra fine ink.

## PIGMENT INK

### Water Resistance

This won't happen with uni Super Ink

Dye Ink

Dyestuff Ink particle is easily soluble in water and will bleed on the paper

uni Super Ink

uni Super Ink pigmented ink will bond itself to the paper fibers. Once it is settled, it is not soluble in water

**uni Super Ink is pigment, it is water resistant**

Dye Ink

uni Super Ink

### Light Resistance

The size of uni Super Ink particle is larger than Dye-stuff Ink. Therefore its surface is less affected and the colour remains vivid.

Dye Ink SIZE :1-3nm

uni Super Ink SIZE :30-300nm

uni Super Ink is light resistant compared to Dye ink equivalent to 72 years

**The particle of uni Super Ink is less effected, it is light resistant**

The electron microscope image of uni Super Ink

### Time Resistance

Difference between structure of molecules. Molecules break down because of the sunlight and air.

Dye Ink Easy to breakdown

uni Super Ink Not easy to breakdown

uni Super Ink lasts longer than Dye ink equivalent to 36 years

**uni Super Ink is difficult to breakdown**

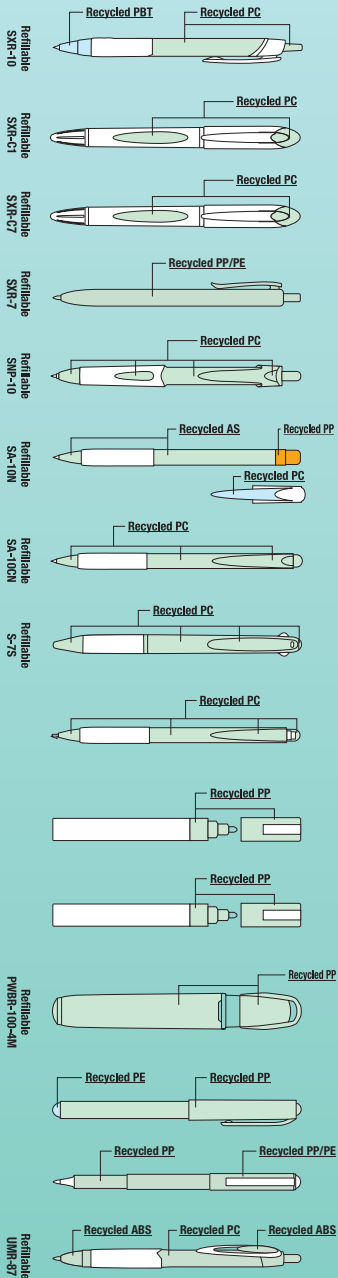

**it is time resistant**

## uni Super Ink complies with ISO 14145-2

Contributing to environmental preservation, Mitsubishi Pencil distributes "Green-Net" products out of recycled plastic.

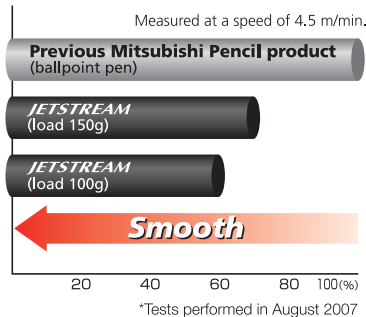

## Refined Sensitivity for the Ultimate Writing Experience Anybody, Anywhere, Addicting Smoothness!

Newly-developed JETSTREAM ink features a low-viscosity, highly lubricating solvent not used in conventional ball-point pens. By reducing the coefficient of friction, this assures an incredibly smooth feel when writing.

The high viscosity of conventional oil-based ink (right) results in a comparatively heavy feel when writing. With the newly-developed ink (left), you can enjoy an exceptionally light feel.

### Comparison of friction when writing (according to Mitsubishi Pencil in-house tests)

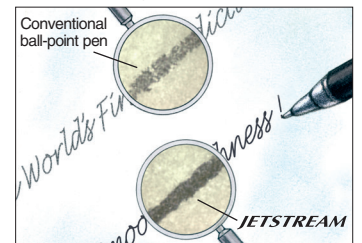

### Try for yourself the JETSTREAM experience!

#### Light and Smooth writing.

#### Vivid writing line.

#### Completely smudge-free, therefore ideal for left-handed writers.

### Crisp, dense lines

The combination of pigment and new colour material provides black density about twice that of conventional ink.

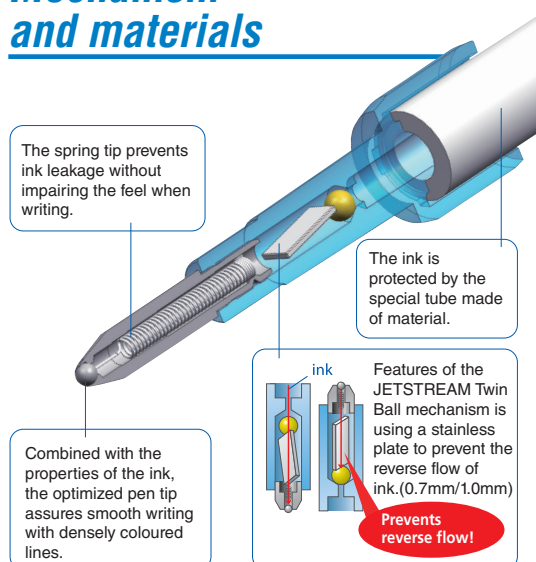

Conventional oil-based ink      JETSTREAM ink

### Extremely quick-drying

JETSTREAM ink easily penetrates paper and rapidly dries. This means less worry about getting ink on your hand if you touch the page after writing, a frequent problem with conventional oil-based ink.

# uni-ball one

Revolutionary vibrant pigment ink makes dark inks look darker and bright inks look brighter. Delivers clear and bold writing without smearing or bleeding. A strong, wide-opening wire clip provides easy attachment to folders or notebooks.

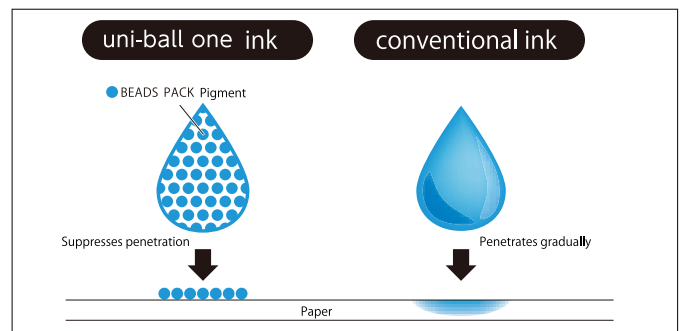

## 【Written letters will not blur on papers and dry quickly】

Usually the conventional ink penetrates into the paper at a slow speed, and the drying time tends to be long. The longer it takes to penetrate the paper, the longer it will take to dry and therefore blurry letters and bleeding occurs. With the newly developed uni-ball one ink, the ink penetrates into the paper faster, but it also contains a newly developed particles that solidifies the ink faster. The advantage of a quick dry and solidification is that the letters do not blur, no bleeding occurs and the colours have more presence because it stays on the top of the paper.

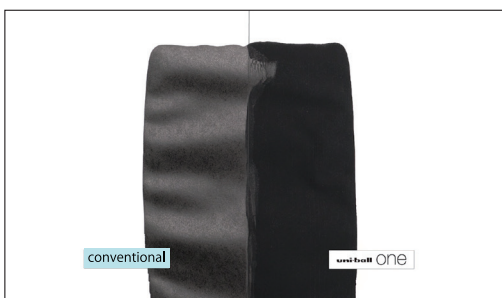

## 【BEADS PACK Pigment】

We have developed a totally new ink that we have called < uni-ball one ink >, this revolutionary new ink is different from the conventional gel ink because it can infiltrate much better into the paper fibers. Our new technology allows us to control the colour inside the pigment particles called "BEADS PACK Pigment". "Control the colour" means that we are able to have the colour particles on top of the paper and colour materials show their original colours without filters. Therefore the black colour shows a more dense black colour, and other colour inks are visible with more brightness.

## 【The black colour of uni-ball one shows a darker black colour】

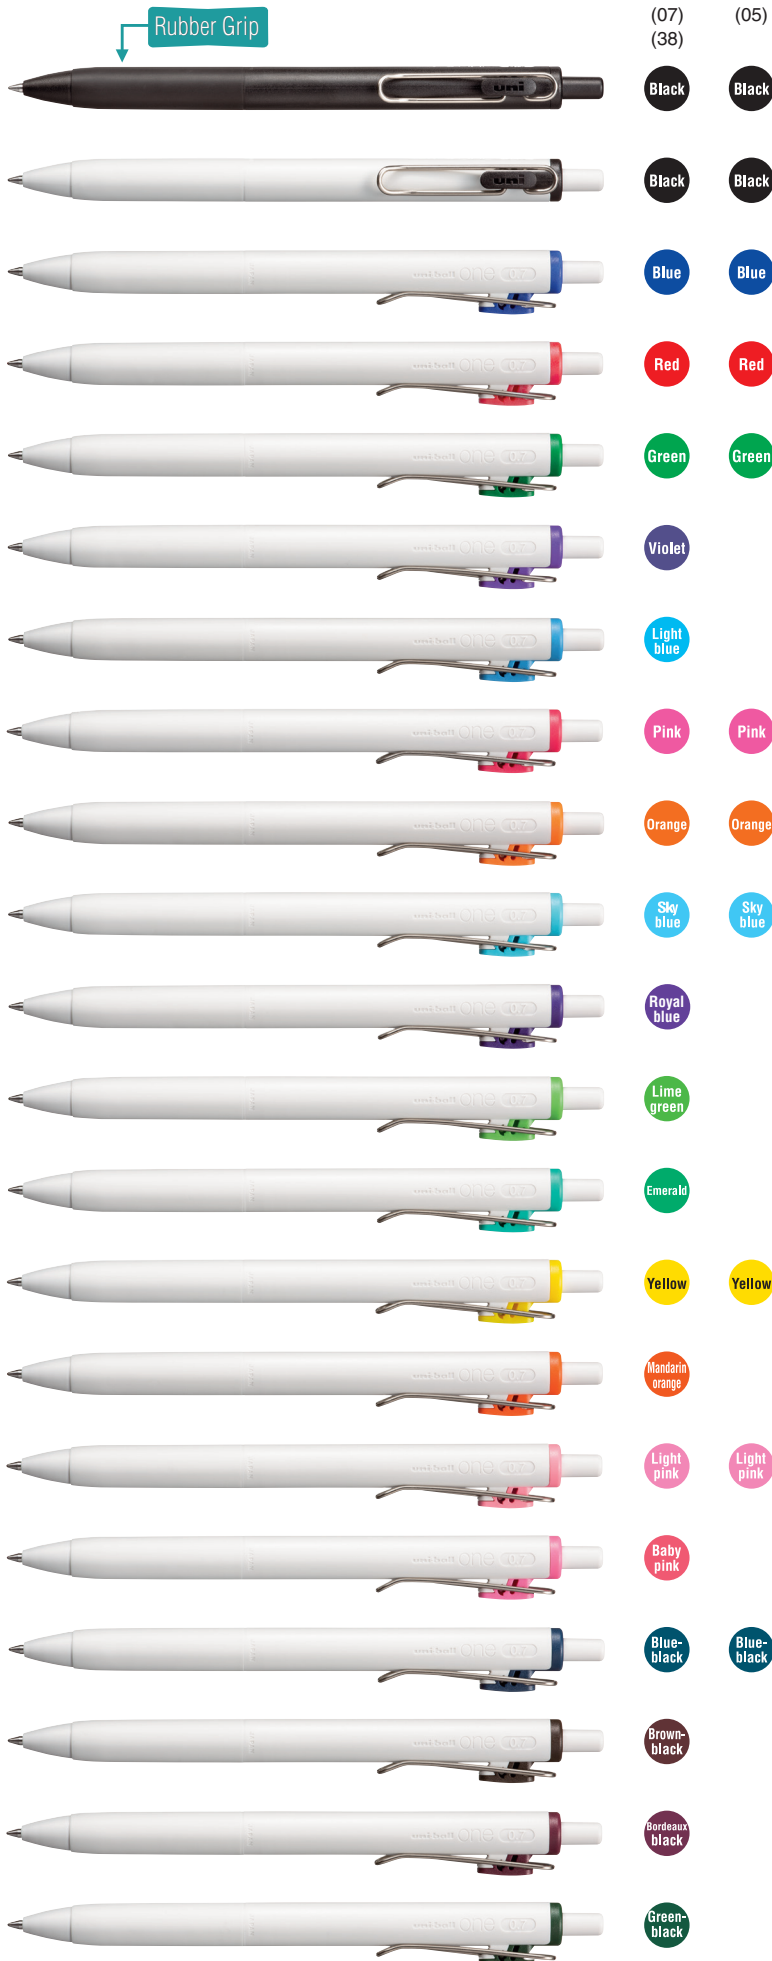

These features of uni-ball one can help people to write clearer texts, with more presence that can allow them to retain things they wrote in their memories. The black colour of "uni-ball one" is much darker than other black colours of conventional gel ink ball point pens, and colour inks have more brightness compared to colours drawn by other pens. When you look back on your own letters on your notebooks later, you would find that you wrote clearer and more impressive texts on your notebooks than ever before.

GEL INK ROLLER BALL

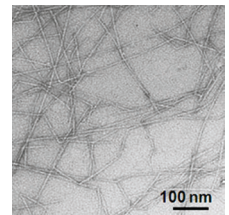

# uni-ball *sigNo* 307

World's First Practical Application of Cellulose Nano Fibers the Uni-Ball Signo UMN-307, Newly improved Gel Ink Roller Ball Pen.

The cellulose nano fiber, a next-generation plant-derived material that

is being developed for use in various industries. The world's first practical application of this fiber material was made possible with the technologies for dispersing ultrafine particle pigments, and evenly mixing extremely thin cellulose single nano fibers into the ink.

Cellulose nano fiber

# Express Yourself In Style

- Scratch-Free Tip reduces scratching, even when writing with the pen laid flat. This allows the user to write in a more flexible position.
- High-quality finish with a metal clip and ergonomically-designed rubber grip, etc.
- Long Shelf-Life. ● Quick-Drying.

Cheque Washing

A cheque fraud crime, also widely known as "cheque washing" has become a serious issue in countries where cheques are the major forms of payment. A thief gets a hold of the cheque you made out to the phone company, for example, "washes" the name and the amount with basic household products to make the cheque payable to himself/herself. Soon enough, you realize that large amounts of money have been withdrawn from your account.

Most inks are easily "washable", especially dyestuff ink. On the other hand, uni's pigment ink has superior water resistance, so you will not see any degradation or fading. To prevent your cheques from being "washed" and reused, you can rely on uni's pigment ink that has earned a reputation for securing signatures and important documents.

# uni-ball signo

From 0.28mm-sized ball for thin lines to 1.0mm-sized ball for fine lines

- Ultra-fine tip featuring a 0.28mm-sized ball enabling precision writing for planners and technical drawings.
- 0.28mm-sized to 1.0mm-sized balls for versatile application at work or school.
- Self-developed, precision stainless steel tip with superior durability and gel ink that enables you to draw solid, fine lines.
- Unique twin-ball mechanism prevents ink backflow and leak.
- Rubber grip that fits comfortably in your hand for ultra-fine precision and fatigue-free writing.

### Comparison of Line Thickness

0.28 mm  $\phi$  Tungsten carbide ball  
 0.38 mm  $\phi$  Tungsten carbide ball  
 0.5 mm  $\phi$  Tungsten carbide ball  
 0.7 mm  $\phi$  Tungsten carbide ball

## uni-ball signo

### Gel Ink and Twin-Ball Structure of the Twin-Ball Mechanism

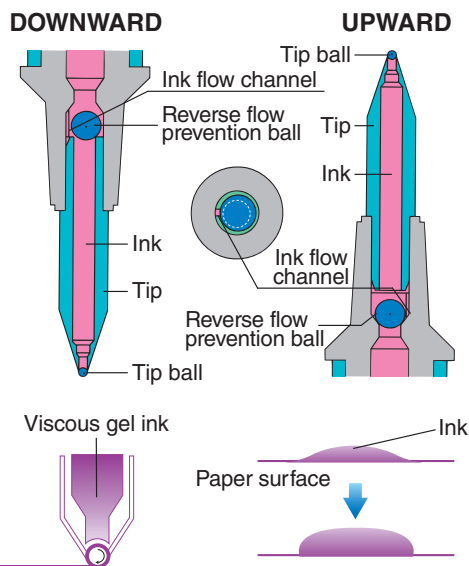

Employing a water-based gel ink, Signo ensures constant ink flow without blurring or dripping. Its twin-ball mechanism prevents excessive ink flow.

- When the pen is positioned in a downward position, the ink flows smoothly from the ink flow channel.
- When the pen is positioned in an upward position, the reverse flow prevention ball works to stop the flow of air into the ink.

### Gel ink writes smoothly and does not blur!

When you start writing, the ball in the pen rotates to mix the viscous ink causing it to thin. The pen glides on paper, providing a smooth write.

Once the ink touches the paper, it hardens quickly when returning to its previous viscosity, which allows you to draw lines that do not blur.

Less is More

# uniball ZENTO

The concept behind this pen is “Less is More”, which means to eliminate what is not necessary and sharpen it to reveal its essence. This newly developed retractable water-based roller ball pen features a sleek barrel design that leaves only the essentials.

**Writing smoothness**

Paper Surface Friction Coefficient

Our conventional product: ~90

uniball ZENTO: ~50

← smoother

uniball ZENTO is approximately **40%** smoother than conventional product.

**Does not bleed out and bleed through**

**Dye ink**  
dissolve in water or solvent  
=>bleeds out

**ZENTO ink**  
[Pigment ink]  
The transparent particles enter the gaps between the paper fibers and prevent the pigment from spreading on the paper, making it more difficult to bleed than conventional pigment ink.

**Pigment ink**  
particled tend to remain =>not bleed

**High quality of writing lines**  
Lines are clear and not blurred.

**Water resistant**  
Lines are difficult to dissolve in water.

**Quick drying**  
Does not smear.

**Durable open-wire clip**  
[patented acquired]

**Eco-Friendly Barrel**  
• Use over 75% of Recycled plastic material.  
• Retriable

**Long rubber grip**  
fits various holding positions.

Made with 75% recycled plastics, 10% of which are harvested from the ocean, the uni-ball Eye Ocean Care is the sustainable future of handwriting. Plastic waste accounts for around 70% of total ocean waste, and this waste is usually incinerated or goes to landfill. Now we're putting it to good use in the manufacture of our uni-ball Eye Ocean Care.

# No.1 Longest Writing! 1,800m! \*

\*According to "free ink" category with bullet tip.  
According to Mitsubishi Pencil in-house tests / 2014.

uni-ball eye "ultra micro" is the first roller ball in the world to have a size of 0.38mm with bullet type tip.  
uni-ball eye "ultra micro" is able to write approximately 1,800m and the newly developed tip ball inside the tip resists more than over 1.5 million times rotations.

## Safety Cap

A cap design that eliminates the possibility of children swallowing and choking with the cap. Despite the vent hole, the cap firmly covers the tip when closed and prevents the tip from drying.

## Structure of the UNI-FLOW SYSTEM

The "UNI-FLOW SYSTEM" ensures smooth writing performance to the last drop of ink. Excess ink flow from the ink reservoir can be temporarily stored to ensure constant ink flow to the pen point.

- Durable pen tip that won't bend or break even under strong pen pressure.
- Constantly sharp pen line is maintained from first stroke to last.
- Quick drying and smooth ink flow system means your documents remain Smudge-free.
- The "UNI-FLOW SYSTEM" ensures continuous and consistent ink flow until the last drop of the ink.

● Durable needle tip

● Facilitates drawing of an unbroken, uniform straight line.

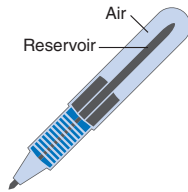

# For the Flying Business Person

This is the ultimate choice for people who frequently fly for business. This pen is not affected by changes in air pressure in a plane due to the newly developed "Airplane-Safe Technology" and achieves uniform lines and smooth writing. You can rely on this pen when you want to check business documents or write a letter to your family from the sky.

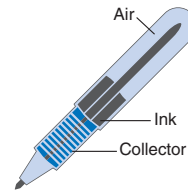

## Say Good-Bye to In-Flight Ink Leaks

Designed to compensate for rapid changes in air pressure, the airplane-safe uni-ball VISION ELITE eliminates in-flight ink leaks, taking the pressure out of flying.

Newly adopted reservoir reduces the space in which air can be expanded, thereby minimising the expansion of air inside the ink tank.

By bypassing a collector, expanded air is expelled before forcing the ink out. This results in less forceful ink flow and prevents ink leaks.

## uni-ball VISION ELITE

# uni POWER TANK

Pressurised Ball-Point Pen

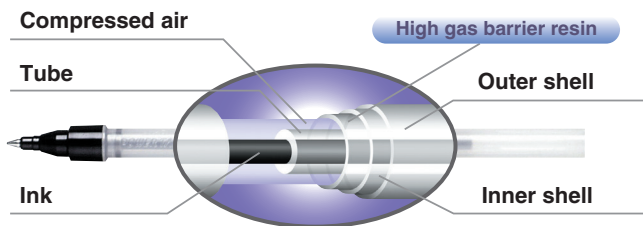

*Write upturned, on most surfaces, and in extreme cold.*

Versatile enough to write on damp paper

- Easy to write in the upright position, a feature never before possible with conventional pens.
- Smooth and clear writing on wet paper or even in outer space where there is no gravity.
- No skipping or blurring even when writing quickly.
- Cold resistant ink that will not freeze in temperatures as low as  $-20^{\circ}\text{C}$ .

## Transparent Pressurised Refill

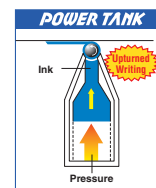

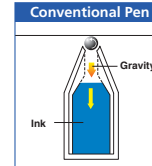

Conventional Ball-Point Pen

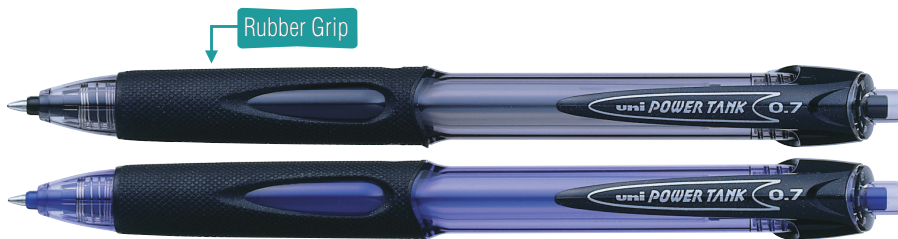

POWER TANK

It has only been possible to produce metallic, non-transparent refills, but now you can check the ink supply with the world's first transparent pressurised refill made possible by Mitsubishi Pencil.

## Smooth Writer

- Comfortable grip that lets you write for long periods of time without getting tired.
- Recommended for those who write extensively at work or school.
- New formulated ink corresponds drawing line with refill colours.
- Choose a variety of pens with options such as thickness, colour, retractable or with cap from a full-range lineup.

Innovative new ink features optimum viscosity. The result is a smooth writer that produces flowing lines with no scratches or smears.

The long rubber grip of the new design makes the pen exceptionally easy to hold and provides fatigue-free writing.

# uni KURU TOGA

The world's first auto-rotation mechanical pencil

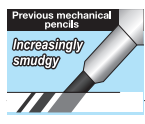

## "KURUTOGA engine"

Rotation of the lead keeps the pencil with a constant sharp edge and gives users a comfortable writing experience. This discovery led to the creation of a brand-new core rotation mechanism.

### Conventional

Learn from yesterday, live for today, hope for tomorrow. The important thing is not to stop questioning.

### KURU TOGA

Learn from yesterday, live for today, hope for tomorrow. The important thing is not to stop questioning.

- The lead rotates fractionally to maintain an even, cone-shaped tip
- It is resistant to breaking and delivers a crisp, dense line

# KURU TOGA ADVANCE Mechanical Pencil

Mechanical pencil that provides constant line-width and density.

<Feature>

**"KURU TOGA W SPEED ENGINE"**  
Auto rotation mechanism  
The lead rotates in double speed compared to previous models.  
20 strokes, 1 rotation.

**"BREAKAGE-FREE MECHANISM OF THE LEAD"**  
The guide pipe retracts when writing and it protects the lead from breaking.

# POSCA PENCIL

POSCA Pencils are new creative tools that are perfect for use in graphic techniques, fine arts and also for decorative purposes. Ideally suited to mixed uses, they are compatible with acrylic-based creations, watercolours as well as coloured inks. They are also, of course, compatible with the POSCA pastels and paint markers.

**KPE-200**

**MATERIAL:** Wax, Talc, Pigment, Resin  
**BARREL:** Wood  
**COLOUR:** 36 colours (White, Yellow, Bright-yellow, Orange, Green, Khaki-green, Light-blue, Navy-blue, Prussian-blue, Fuchsia, Dark-red, Red, Vermilion, Dark-olive, Ochre, Brown, Dark-brown, Light-grey, Black, Lemon-yellow, Ash-brown, Emerald-green, Blue, Lilac, Mauve, Grey, Blue-green, Ivory, Light-pink, Fresh-green, Light-orange, Dark-grey, Coral-pink, Green-tea, Pine-green, Light-ochre)

# POSCA PASTEL

POSCA Pastel is a range that is ideally suited to all nomadic uses. Its high natural pigment concentration ensures a powerful and instant colour intensity for matt, vivid and bright finishes. Thanks to its unique blend of wax and oil, POSCA Pastel can be used to work cleanly, without excess material: this is quite a revolution in the daily life of creative people.

## KPA-100

**MATERIAL:** Wax, Talc, Pigment, Resin  
**BARREL:** Synthetic paper  
**COLOUR:** 24 colours (Black, White, Grey, Dark-brown, Brown, Light-ochre, Prussian-blue, Blue, Light-blue, Sky-blue, Violet, Fuchsia, Pink, Red, Vermilion, Dark-red, Bright-yellow, Light-orange, Yellow, Apple-green, Light-green, Green, Emerald-green, Dark-olive)

Add more colour into your everyday life  
Express your creativity with your favorite colours  
EMOTT- Marking pen that helps you communicate your true self

**Water-based marking pen**  
Line width : 0.4mm

**Point1**  
ever fine  
= Consistent fine line width

**Point2**  
Water-resistant pigment ink  
Does not smudge even when in contact with water.

**Point3**  
Convenient case

5 colours assort  
The 5-piece portable pen holder stands upright, each pen simply clicks into place.

10 colours assort  
When the lid is open the 10-piece case rests at a convenient angle-making it easy to remove the pens.

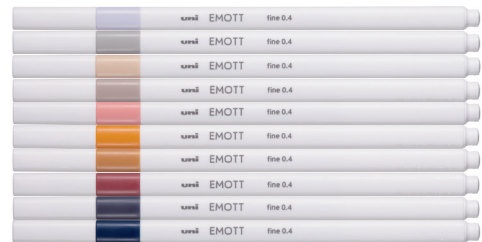

Durable tip  
Water-resistant pigment ink  
Convenient grab & go storage case

Outer cover  
Pen Tip  
Features an outer cover that prevents the tip from bending or splitting.

## NEAT & PRECISE

### Large range of tip sizes

The Uni PIN is a precise, technical writing and drawing felt-tip pen. With its calibrated tip and SUPER INK, it guarantees permanent, intense, clean and precise lines. Both robust and well designed, recognised for the density and high coverage of its colours, it is the essential tool for numerous artists and professionals for their technical or artistic creations including mixed techniques.

# uni PROCKEY

No need to worry about ink striking through

- Does not strike through thin or porous paper.
- Writes on almost any surface including OHP films and is entirely waterproof once the ink dries.
- Water-based marker that is completely odorless.
- Incorporates special non-fading, water-base pigment ink.

## PROCKEY

**PWB-205**

**LINE WIDTH:** 1.0-5.0mm  
**NIB:** PET/Chisel shaped  
**BARREL:** Plastic (PP)  
**INK COLOUR:** 4 colours (Black, Blue, Red, Green)  
**OTHERS:** Xylene-free ink

**inkview whiteboard marker**

**You can choose which marker to use at a glance**

- Transparent barrel "inkview" allows you to easily see the remaining ink.
- Employs newly developed ink, which produces smooth writing and is easy to erase.
- Will write until the last drop of ink is used.

**Easily Monitor the Ink Supply**

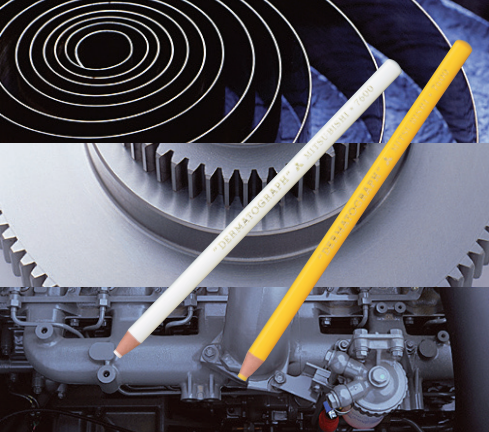

Still Usable
